

HAZIBAG®

When it comes to packaging and transporting dangerous goods there are plenty of regulations, but quite often the application of those rules is not clear or easy. Associated costs (direct or indirect) can be excessive and the options available are limited.

Those products that are available in the market today offer their users "legally acceptable" solutions which are often only marginally safe, uneconomical, impractical and labour intensive. In today's world of technology and innovation there has to be a better way to do business!

This is where the Hazibag comes in. The one product in the market today that is not only compliant with the strictest regulations, it well exceeds safety and quality standards of comparable products, it is cost effective and extremely practical. The only viable solution for your dangerous goods storage and transport needs.

Certified by the National Australian Testing Authority that is independent of any company affiliations, Hazibag sets a new benchmark in the UN FIBC market.

- Construction
- Shipbreaking
- Manufacturing
- Abattoirs
- Oil & Gas
- Energy
- Mining
- Health Care - Medical
- Quarantine
- Emergency Services

No matter which industry you are in, we will work with you to find the "Hazibag solution" that best suits your needs.

- No decontamination costs.
- No secondary handling and exposure to contamination.
- Reduced carbon footprint.
- Minimal labour costs.
- Minimal storage, handling and transport requirements.
- Reduced transport and storage costs.
- Different sizes available; will satisfy all requirements.
- Environmentally friendly; Recyclable.
- No harmful emissions when incinerated.
- High BTU rating as a thermal fuel.

WORLDWIDE PRODUCT AND PUBLIC LIABILITY INSURANCE COVERAGE

Specializing in the dangerous goods industry, Hazibag will take care of all your packing group II & III solid dangerous goods and hazardous waste needs.

The one solution that satisfies all regulatory requirements and work place safety mandates.

**EACH YEAR THE WORLD PRODUCES MORE THAN
400 MILLION TONNES OF HAZARDOUS WASTE
13 TONNES EVERY SECOND
60 KG FOR EVERY PERSON ON EARTH
IF YOU CAN'T CHANGE IT
AT LEAST DO IT RIGHT!**

IS YOUR JOB WORTH DYING FOR?

Asbestos is the single biggest industrial killer. According to research, asbestos could eventually claim as many as ten million lives. One person every five minutes dies from an asbestos related disease.

January 1, 2005 asbestos was banned throughout the EU. But for many years to come workers in industries like building, shipbreaking, rail, etc. will keep coming in contact with asbestos daily and the death toll will keep on rising.

The current "safe" method of containment and transport of asbestos is to double wrap it in plastic ... Is it safe? No, not really. We all know this. Isn't time we stand up and say enough is enough? There is a safer method out there, let's use it!

Asbestos dust is safely confined in the Hazibag preventing accidental airborne transfer and contamination. Hazibag is the asbestos "cradle to grave" solution. For as long as there is the need to transport asbestos the Hazibag is the safest containment device available!

ASBESTOS
"A DEATH SENTENCE FOR MILLIONS OF PEOPLE"
HOW DO YOU MOVE IT ?
IS IT SAFE ?
ARE YOU CERTAIN ?

Hazardous waste, if disposed of improperly, may threaten human health and the environment.

Hazibag aims to help minimise this danger by providing a simple, affordable and environmentally friendly solution.

NEVER LOOSE ANOTHER SHIPMENT

The transportation of Dangerous Goods involves risks. Safety is a priority that cannot be ignored as the potential harm to the population is great. With Hazibag's new tracking feature, you will know exactly when your goods or wastes reach their destination. If there is a delay - you will know. If part of it is missing - you will know!

And most importantly it is absolutely **FREE!**
No satellites or other expensive hardware required.
No complicated software required.
A smart phone and our web based software will do it!

The Ultimate FIBC!

- Unparalleled safety due to quality of construction.
- Time saving due to the simplicity and ease of use.
- Increased control, due to tracking ability.
- Immediate access to important safety information from the QR code; a very useful tool for all Hazibag users.

1 CUBIC METRE- 800 KG SWL
1.5 CUBIC METRES - 550 KG SWL
3 CUBIC METRES - 1000 KG SWL

HAZIBAG® AUSTRALIA

Hazibag Australia was established in 2010, and is the Exclusive Distributor for the Hazibag in Australia and New Zealand.

Our product is a benchmark in its field, therefore it is essential for us to maintain the same superior standards in our relationships with our customers.
We strive to find and work with business people that share our views and meet high standards in business practices, environmental responsibility and excellence in customer service.

Hazibag Australia is working closely with the developer and manufacturer of the Hazibags in designing new products that accommodate client / industry specific requirements.

With more products still in the testing / certification phase and others in the design / development phase we are looking at a very exciting future.

We are committed to providing the best available solutions to our clients, and driven by your suggestions and requests we are continuously seeking new technologies and innovative products to supplement and expand our portfolio.
